This file explains how I use the following commands:

- "signifnote" is a command that provides a legend for interpreting the asterisks as significance levels
  * p < 0.1, ** p < 0.05, *** p < 0.01.
- "clusternote" explains how the standard errors are clustered at a specified level and includes the significance legend.
  Standard errors are clustered at the item level and reported in parentheses.
  * p < 0.1, ** p < 0.05, *** p < 0.01.
- "tabnotes" adds explanatory text at the bottom of the table to offer additional context or details about the presented data or analysis method.
- "estwide" make table in a given width
- "estadjustwide", similar to estwide, but also control font size to ensure the table fits well within the document's layout, especially when dealing with wide tables.

Table 1: Here is a table

Dependent Variable:	Sepal.Length		
	(1)	(2)	(3)
Petal.Length	0.238	0.283	
	(0.275)	(0.265)	
Petal.Width	0.252		
	(0.285)		
Sepal.Width	0.655***	0.667***	0.690***
	(0.092)	(0.092)	(0.086)
cons	2.352***	2.304***	2.639***
	(0.437)	(0.434)	(0.299)
R^2	0.58	0.57	0.55
Observations	50	50	50

Notes: This table shows something Standard errors are clustered at the Spices level and reported in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.

Table 2: Here is another table

Dependent Variable:	Sepal.Length		
	(1)	(2)	(3)
Petal.Length	0.238	0.283	
	(0.275)	(0.265)	
Petal.Width	0.252		
	(0.285)		
Sepal.Width	0.655***	0.667***	0.690***
	(0.092)	(0.092)	(0.086)
cons	2.352***	2.304***	2.639***
	(0.437)	(0.434)	(0.299)
R^2	0.58	0.57	0.55
Observations	50	50	50

Notes: Here I change the font sizes - useful for wide tables. Standard errors are clustered at the Spices level and reported in parentheses. * p < 0.1, ** p < 0.05, *** p < 0.01.
